World exclusive

— CRYOTHERAPY AND HYDROMASSAGE FOR HORSES

Catalogue 2027

The new Curaboos V5 range

www.curaboos.com

Leg recovery for your equine athlete.

Curaboos combines cryotherapy and hydromassage in a single boot, a world exclusive: water and ice for cold, air for circulation. In the stable, at shows, in the clinic.

A world exclusive for equestrian sports: we have developed **horse boots** that use the **cryotherapy** and **hydro-massage** effect for the recovery of **muscles** and **tendons** and for the **treatment of trauma** or **microtrauma** of the skeletal system.

Whether it is a racehorse, a showjumper or a western horse, **Curaboos** help and speed up recovery, also relieving the pain caused by competitive and amateur competitions.

- In partnership with the University of Perugia
- Chosen by international riders
- Pay by card or bank transfer
- Custom-made and in the colour you like

— NEW FOR 2027

New Curaboots V5.

Curaboots presents the new V5 2027, a world exclusive: hydromassage no longer runs through internal tubes, because the air recirculates in forced chambers directly inside the boot.

The base has been completely redesigned, with a thicker base and lower cone walls and corner supports that stiffen the boot. V5 boots come in 50 and 70 cm sizes and in the 90 cm MED version, in different colours.

Every V5 boot is handmade, one by one, in Italy, and individually tested for 48 hours under water pressure to check its seals: waterproof.

What's new in the V5

01 Hydromassage without internal tubes

The air recirculates in forced chambers directly inside the boot and rises along the whole leg.

02 New quick coupling

High-performance female quick coupling for compressed air, with double reinforcement in the chambers: built for intensive daily use on several horses.

03 Redesigned base

Thicker base and lower cone walls, corner supports that stiffen the boot.

04 Waterproof

Every boot is tested for 48 hours under water pressure to check its seals.

05 Handmade in Italy

Built by hand, one by one.

06 Born in competition

Developed in international show jumping, endurance, dressage and eventing competitions.

Detail photos taken on the Curaboots V5 M-50: the same materials and finishes on every model of the V5 range.

— CRYOTHERAPY · WATER AND ICE

Cold that soothes.

In equine athletes, cold is a recognised treatment for musculoskeletal injuries.

The usefulness of low temperatures in medicine was already known in ancient Egypt and is documented in the writings of Hippocrates. Modern cryotherapy is based on principles identified in 1978 by the Japanese doctor T. Yamauchi, who built the first cold chamber for the treatment of rheumatoid arthritis.

Widely used in sports medicine, the effects of cryotherapy depend on the intensity of the cold and on the duration, frequency and method of application. Applying localised cold immediately after exercise effectively limits pain and soreness.

Cryotherapy sessions should last no more than **15 minutes**, with the aim of bringing the area to a temperature closer to zero.

The effects of localised cryotherapy

- **Analgesic:** reduces pain and soreness after exercise
- **Anti-inflammatory:** vasoconstriction limits swelling and inflammation
- **Muscle relaxant:** helps release contractures and cramps
- **Haemodynamic:** thanks to the vasoconstriction induced by the lower temperature
- **Metabolic:** reduces the extent of ischaemic damage due to hypoxia
- **Laminitis:** beneficial in treatment and prevention, especially endocrine and endotoxic laminitis

— HYDROMASSAGE · WITH COMPRESSOR

Water that **revives.**

Hydromassage relaxes and improves blood circulation: it is a source of both physical and spiritual well-being.

It was only in the 1990s that hydromassage gained recognition as a **wellness therapy** and relaxation technique.

In the new V5 the air no longer runs through internal tubes: it recirculates in forced chambers directly inside the boot and rises along the whole leg. With valve boots and the low dBA compressor, cold and hydromassage work together in the same session.

Benefits

- **Circulation:** improves blood and lymphatic flow
- **Drainage:** reduces fluid retention
- **Well-being:** relaxes the horse during treatment

How it works, in three steps

01

Put on the boot

Slide Curaboos onto the horse's leg, in the stall, in the warm-up arena or in the clinic.

02

Fill with water and ice

A cryotherapy session lasts at most 15 minutes.

03

Turn on the hydromassage

With valve boots, connect the compressor: the air rises along the leg.

Boots without valve are for cryotherapy only and do not connect to the compressor.

The athletes who choose Curaboos.

Many of the best riders and international equestrian professionals use Curaboos for the recovery and well-being of their horses.
The trust of these champions is the best testament to the effectiveness of Curaboos cryotherapy and hydromassage.

Francesca Salvade

Born in the stable, for horses.

The company Curaboos, owner of the **Curaboos** and **The Curaboos Original** brands, created the world's first boots with a hydro-cryotherapy effect, still a world exclusive today.

It all started with an entrepreneur who has lived equestrian sports for almost 40 years: in show jumping he needed his horses' muscles to recover in a short time.

Hence the idea of consulting a European veterinary centre, which advised him to use ice to increase blood flow to the lower limbs and relieve the horses' pain: research and studies identified cryotherapy as the best non-invasive and natural treatment.

Within six months **Curaboos** was born: the first version was a water and ice container. Version after version, materials and construction have improved, up to the integrated hydromassage of the new **V5**.

Simplicity

A few steps, in the stall, in the warm-up arena or in the clinic.

Ergonomics

Light, portable, custom-made and in the colour you like.

Results

Chosen by international riders and by a university clinic.

Every Curaboos is born in our Research & Development office.

Before a new model reaches the stable, it goes through our R&D office. Here every boot is designed and prototyped in CAD, then studied in every single detail: shape, materials, pressures and load points.

Exploded view: leg, quick coupling, base and sole · 3D study, three-quarter view · 3D study, side view

The R&D method, step by step

- **CAD design.** Every boot is drawn and prototyped in 3D before it becomes real.
- **Prototypes.** Shape, materials, pressures and load points studied in every detail.
- **Testing.** Every boot spends 48 hours under water pressure before it leaves, and every new model is put to the test in international competitions.

The step from V3 to V5 was born right here. These details are invisible from the outside, but they make the difference treatment after treatment, season after season.

Rotate the Curaboos V5 through 360° in the 3D configurator on our website.

Choose the right height for your horse.

M-50 and L-70 are available as a complete kit with compressor, with valve for hydromassage or without valve for cryotherapy only; the 90K MediCAL as a single boot, pair or kit.

NEW 2027

Complete kit

Curaboos V5 M-50K kit

CODE KIT-M50K

Curaboos 50 cm high with valve, low dBA compressor and tubes: everything you need for cryotherapy and hydromassage.

- 1 pair of Curaboos V5 2027 boots with valve
- Height 50 cm
- 1 low dBA compressor
- Connection tubes and accessories
- Shipping included throughout Europe, delivery in 3-5 days

Not included: ice machine

NEW 2027

Boots with valve

Curaboos V5 M-50K with valve

CODE M50K-27

Curaboos 50 cm high with valve, for cryotherapy and hydromassage. Pair them with a compressor if you do not have one.

- 1 pair of Curaboos V5 2027 boots with valve
- Height 50 cm
- Shipping included throughout Europe, delivery in 3-5 days

Not included: compressor, ice machine

NEW 2027

Boots without valve

Curaboos V5 M-50 without valve

CODE M50-27

Curaboos 50 cm high without valve: cryotherapy only, they cannot be connected to a compressor.

- 1 pair of Curaboos V5 2027 boots without valve
- Height 50 cm
- Shipping included throughout Europe, delivery in 3-5 days

Not included: ice machine

Curaboos V5 L-70

70 cm boots for horse cryotherapy and hydromassage.
Complete kit with compressor, boots with valve or without valve.

- Veterinary medical use
- Made to order: production and delivery in 10-14 days, shipping included throughout Europe

Not included: compressor, ice machine

NEW 2027

Complete kit

On request

Kit with pair of Curaboos V5 90K MED

CODE MED902K

- 1 pair of Curaboos V5 2027 MED boots with valve
- Height 90 cm
- 2 low dBA compressors
- 2 sets of connection tubes and accessories
- Veterinary medical use
- Made to order: production and delivery in 10-14 days, shipping included throughout Europe

Not included: ice machine

Compressor and spare parts.

Low dBA compressor

CODE COMPRESSORE

The compressor designed to keep any noise to a minimum, with silenced technology: it powers the hydromassage of every Curaboots boot with valve.

- Easy to use, thanks to its pressure gauge
- Ergonomic, light, portable
- Anti-vibration feet
- Shipping included throughout Europe, delivery in 3-5 days

Original spare parts

NEW 2027

Curaboots V5 spare parts

CODE RICAMBI-V5

For V5 boots: the tubes connecting them to the compressor, pressure-tested.

- Tubes connecting Curaboots V5 boots to the compressor
- Tubing pressure-tested at various bar
- Shipping included throughout Europe, delivery in 3-5 days

Curaboots V3 spare parts

CODE RICAMBI

For V3 boots: all the tubing for hydromassage, pressure-tested.

- Tubes connecting Curaboots V3 boots to the compressor
- All the internal tubes that activate the hydromassage
- Tubing pressure-tested at various bar
- Shipping included throughout Europe, delivery in 3-5 days

Ice for cryotherapy, **always ready.**

Stainless steel machines to always have ice in the stable: from the compact model with water tank to the professional ones for equestrian centres that do cryotherapy every day on several horses.

Ice machine

CODE GHIACCIO-ECO

Up to 39 kg of ice in 24 hours, stainless steel, tap or bottle water supply.

- Up to 39 kg of ice in 24 hours, 36 cubes per cycle, 10 kg storage
- Food-grade stainless steel body
- Dual water inlet: tap or water bottle
- LCD display with timer and self-cleaning
- Stops automatically when the tank is empty or the bin is full
- Size 36 × 43 × 76 cm, 480 W, 220 V
- Shipping included throughout Europe, delivery in 5-7 days

NEW 2027

Professional machines

Professional ice machine 120-P: 55 kg of ice cubes in 24 hours and 18 kg storage, in stainless steel. Designed for stables and equestrian centres doing cryotherapy every day on several horses.

Stainless steel structure, fixed connection to water supply and drain.
